

Helping More Clients, More Effectively with ImmigrationAI

How Burgos, Daigre, and McGregor created a system to help more immigration clients.

Practice Area:

Immigration, personal injury, criminal defense, workers compensation, business transactions, family law, general litigation.

Location:

Louisiana

Optimizer:

Jess Chavez

The challenge

The firm faced a major operational bottleneck: the document intake and form-filling process for immigration cases.

Immigration law requires extensive documentation and multiple form submissions, often containing the same client information repeated across dozens of fields. This led to hours of manual data entry, slowing down case preparation, increasing the risk of human error, and frustrating both staff and clients.

The question was clear:

“How can we improve the document intake process and optimize the form-filling process?”

The solution

To address these inefficiencies, the firm adopted Filevine’s ImmigrationAI, an intelligent document-parsing and automation tool built specifically for immigration workflows.

How it works:

- ImmigrationAI scans and extracts key information directly from uploaded client documents.
- The system auto-populates data across all relevant USCIS forms, minimizing duplicate data entry.
- A real-time interface allows staff to select documents, verify parsed data, and track progress as information is stored consistently across case files.

By integrating this AI-driven approach, the firm dramatically reduced repetitive tasks while maintaining full accuracy and compliance.

The result

The adoption of ImmigrationAI transformed the firm’s case intake and processing speed:

- **Time saved:** AI now extracts data and completes USCIS forms in minutes, freeing staff to focus on client advocacy instead of manual entry.
- **Improved accuracy:** Automated parsing drastically reduces human error, helping cases move forward without costly mistakes or delays.
- **Scalable processes:** The firm can now handle more cases with the same team size, expanding its immigration practice without additional staffing.
- **Better client satisfaction:** Faster, error-free processing leads to smoother experiences and greater trust from clients.

By leveraging automation intelligently, Burgos, Daigre, and McGregor transformed a once time-consuming workflow into a scalable, accurate, and client-centered system.
